CMCiB 3R SEMINAR PROGRAM 2026

The Comparative Medicine and Bioimage Centre of Catalonia (CMCiB) along with the Animal Experimentation Ethics Committee (CEEA) promotes a continuing professional development seminar program for staff working in preclinical research, with a particular focus on updating good practices in working with animal models to **strengthen the 3Rs (Replacement, Reduction and Refinement)**.

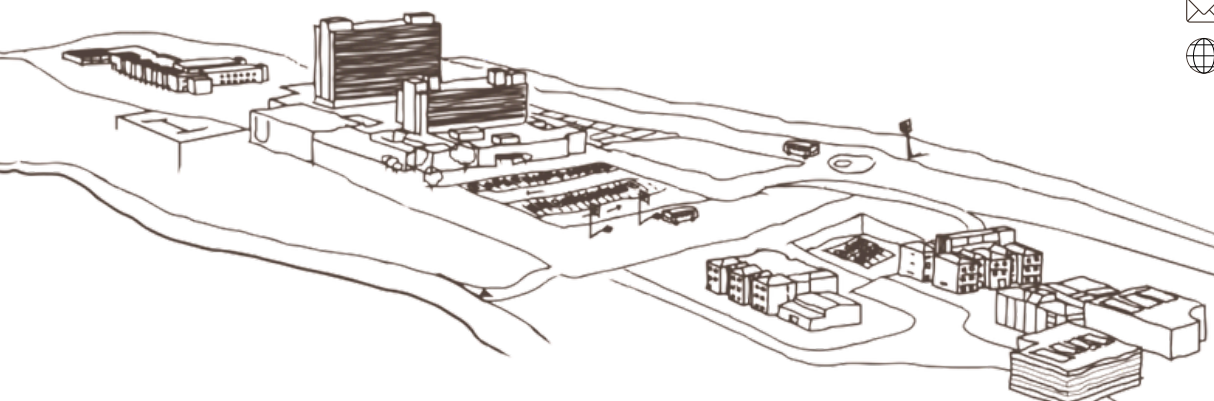

The seminars are free and open to the entire Can Ruti Campus, as well as to any users of the centre who may be interested. They are face-to-face seminars, primarily practical, aimed at addressing questions and providing knowledge on the various aspects that may affect the conduct of an experimental study involving animal models or their alternatives.

There are five sessions planned during the year 2026, which accredit two hours of continuous training each, for the **maintenance of accreditation** to work with animal models. They take place on **Thursdays at 15h** and the language may vary.

Prior registration via the web form is necessary to obtain the certificate. Entrance registration is only for attendance tracking, and capacity is limited.
